

Ventilator cap with a chimney opening

For easy use of a stove in Event Nordic tipis from Tentipi

Our ventilator cap with a chimney opening can be used instead of the ventilator cap that is supplied with the tent. It has the same smart In-Tent Vent system with indoor ventilation adjustment that the standard cap has.

The opening, which is designed for a chimney with an insulation pipe and spark arrester, makes the use of a stove safer. Since the chimney does not need to go out through the normal ventilation opening at the top of the tent, there is no risk of any rain coming in. When the Nordic tipi is used without a stove, the chimney opening is easily closed using the Velcro tape.

The ventilation cap fits the Comfort and Pro models of Cirrus 20, 28, 40 and 72 and Stratus 72. It is supplied without the In-Tent Vent system's ropes and cords. Cirrus Base needs to be supplemented with ropes and cords for external attachment.

20598 EV In-Tent Vent Pro UC, chimney opening

NB! This product has been designed to be used with other Tentipi products. We take no responsibility for damage that can arise if the product is used in other ways.

Opening for chimney.

The chimney opening can be closed with the Velcro tape.
