2 x Cirrus 40 + WallFlex © Tentipi, UK - tentipi.com

Cirrus 20 © Tentipi, Sweden - tentipi.com

Cirrus™ is designed for those customers whose top priority is ease of use. To open the guest entrance, simply undo the two zips and roll up the canvas panel. There's a zippered door opposite the roll-up panel too.

Striking, durable and flexible. Can seat 72, 40, 28, 20 in a stunning setting

Cirrus is a flexible Nordic tipi. Its design makes it perfect for glamping. It can be used as a stand for tourist information or at a trade fair, as an assembly hall at a scout camp or as an atmospheric setting for a wedding party. Up to 72 people can sit at tables around an open fire, eating and having a good time. It can also be used by restaurants that need more space for tables during the summer months.

The Cirrus Nordic tipi has three openings. One serves as a main entrance, the other two as reserve exits. The reserve exits are made with simple zips and the canvas between them can be rolled up, thereby creating an opening that is several metres wide. This facilitates the passing through of trade fair visitors. It also gives party guests an excellent view. It could be the starting line for a competition or be furnished with a sales counter where the preparation and storage areas are protected inside the tent. The broad opening also makes it possible to link a Cirrus Nordic tipi to other Nordic tipis for big events. For instance, Cirrus can be used as a kitchen to serve several linked Stratus 72 Nordic tipis. Or it can be used as a welcome hall, cloakroom, storeroom, lounge, annexe, etc.

Properties

Cirrus includes

Pole set
Hardware, stakes and straps
Canvas
In-Tent Vent™ system (Pro and Comfort)
Packing bag

Optional extras

Secondary pole set (Cirrus 72)
TipiStar™ (Cirrus 72)
SmartPitch™
Tent jack Viking (Cirrus 72)

Photo pack
Floor planning tool
Authentic Nordic Tipis Association
International networking
Spares
Factory repairs
Telephone and e-mail support
And more

EASY ASSEMBLY

Pro and Comfort: Fittings system for fast and easy assembly and high strength.
Base: Simplified fittings system.

VENTILATOR CAP

Pro and Comfort: In-Tent Vent system for simple and effective ventilation and smoke clearance. The ventilator cap is regulated from inside the tent.
Base: The ventilator cap is regulated from outside the tent.

CANVAS THAT KEEPS THE RAIN OUT

Pro: Unique, water-repellent fabric for professional use. Most of our customers who are active in the public event sector choose Pro.

Comfort: Very strong, high-quality cotton/polyester fabric.

Base: Standard cotton/polyester fabric.

THREE OPENINGS AND A ROLL-UP PANEL

One opening serves as a main entrance, the other two as reserve exits. The reserve exits are made with simple zips and the canvas between them can be rolled up.

REINFORCED FABRIC

At ground level for increased protection against wear and rot.

Pro and Comfort: Extra strong reinforced fabric.

WOODEN POLES

From carefully selected trees that have grown under special conditions, giving light poles with unique strength and toughness.

Pro and Comfort: Advanced set of poles.

Base: Simplified set of poles.

AESTHETICALLY PLEASING POLES

The de-barked poles have a beautiful, natural look, avoiding any artificial staining common in processed timber. Each pole is unique, shaped by nature, and an intrinsic part of the character of a Nordic tipi.

SECONDARY POLES

Supplement Cirrus 72 with secondary poles to maintain stability in strong winds.

SUSTAINABLE TIMBER AND NO CHEMICALS

The strong wooden poles come from a specific species of spruce grown in sustainable forests in northern Sweden. They are naturally rot-resistant and totally free of chemicals.

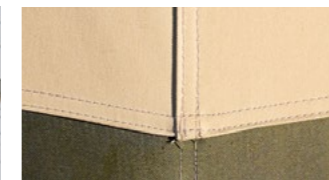

LAB-TESTED TIMBER

The quality of timber varies considerably. To calculate safe wind and snow loads, a certified testing institute has measured various mechanical properties of the timber we use. We have then used the values in certified structural calculations.

STRUCTURAL CALCULATIONS

Our binder of more than 700 pages with certified structural calculations covers many configurations of single and linked Nordic tipis.

SEWN TOGETHER INSTEAD OF LACED

The canvas is sewn together to prevent leakage. Tipi canvases are otherwise usually laced together but that causes weak points and a risk of water penetrating in bad weather conditions.

BAND PINS

The band pins ensure poles are connected safely and efficiently with a tight fit and no protruding components.

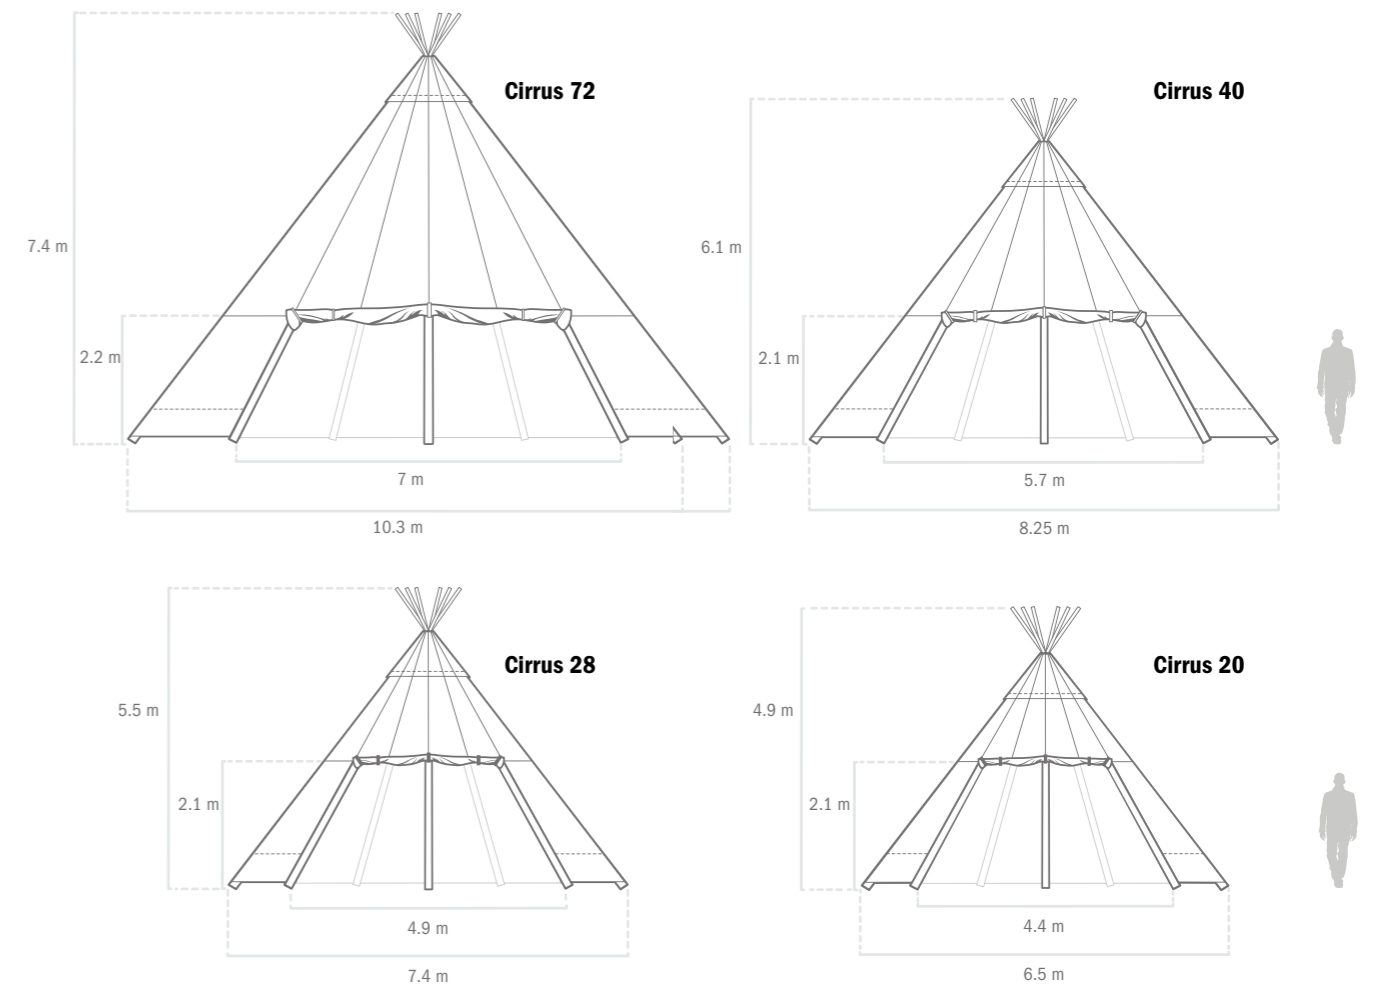

STAKES

The stakes and ground anchors are specially designed for high strength and good functionality.

Specifications

Swedish design and innovation since 1989

Tentipi was founded in Moskosel, a small village in Swedish Lapland, and is today the world-leading manufacturer of linkable event Nordic tipis. Our Nordic tipis are based on the traditional design principles of the Sami kåta but are made of modern materials and with modern construction methods. Our ambition is that an event in a Nordic tipi from Tentipi will be a magical and unforgettable experience.
